EXTREMO THE PERFECT TAILPIPE

Extremo is the perfect tailpipe for car mufflers.

Borne from the desire to create a product that was entirely "**made in Italy**" qualitatively and aesthetically superior to others currently on the auto tuning market.

Extremo is the only silencer tailpipe **without any welding**. It takes shape from special processing making it possible to create a double chamber tailpipe forged from a single element. This processing gives it unbeatable aesthetics as well as an unequalled life span of its original shine, thanks to the fact that no exhaust residue is retained.

Extremo is internationally **patented** and every single one is rigorously made in from **stainless steel** AISI 304 or AISI 316, by request.

EXTREMO CLASSIC

EXTREMO CLASSIC SMALL

TAILPIPE SMALL

Now the new **Small series** is also available, ideal for those who do not want to miss out on the opportunity to have a **high-status exhaust pipe, but at a more affordable price.**

The design of the model is exactly the same as the standard range as well as the diameter; the difference is all in the length that goes from the typical 130 mm to 90 mm (from 145 to 100 mm in the case of the Future model).

A restyling that makes the end cost more affordable and resolves the application problem in certain vehicles in which there is not enough space between the bumper and the muffler.

EXTREMO FUTURE CLASSIC SMALL

TAILPIPE SPECIAL

Extremo Specific is a revolutionary novelty in the field of tuning accessories and in particular in universal silencer tailpipes.

It consists in an Extremo tailpipe to which a shell structure is added at two or more joints (also in stainless steel).

The particular jointed structure of our design makes it possible to attain the right angle for assembly, thus making it possible to add the tailpipe to any type of muffler and any kind of car, without needing to cut the muffler or the bumper.

EXTREMO SPECIFIC CAPTIVATING

TAILPIPE SPECIAL

20

Big Tuning is the most impressive model from our range of exhaust pipes.

With its 110 mm diameter and 120 mm length, it adapts perfectly to flashy and elaborate vehicles like those made in the world of tuner cars. It's also perfectly suited to large sized cars like SUVs, further enhancing their looks.

It's available in Classic and Sport versions. Due to its considerable weight, Big Tuning is only available in the version to be welded.

HOW IT ATTACHES

HOW IT ATTACHES

The Extremo tailpipe is delivered equipped with a special **kit of screws and a key**, that make installation of the tailpipe muffer easy and fast. The Small series comes with holes and simple screw threads.

Welded versions can be supplied on request (without screw holes), or with a key fastener, at an additional cost.

Before buying the tailpipe it is necessary to verify the **diameter** of the end part of the muffer to make sure the fit is **compatible**.
